RE: Site Management Activities Completed, Rutland, Vermont (SMS site #94-1674)

Dear Mr. Lunt:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has received and reviewed the September 24, 2001 Marin Environmental report concerning the above referenced site. Based on a review of the file, the current conditions at this site and the results of the information submitted, the SMS has determined that this site meets the Waste Management Division's Sites Management Activities Complete (SMAC) policy.

This means that the SMS has determined the following:

- ☐ the source of the potential contamination at this site has been adequately characterized and removed (the underground storage tanks(USTs) and piping have been removed);
- ☐ groundwater under the site currently meets Vermont Groundwater Enforcement Standards;
- ☐ the site does not pose an unreasonable risk to human health or the environment.

Based on these findings, the site has been assigned a Site Management Activities Completed (SMAC) designation. Sites which the Waste Management Division has determined require no further management are classified as SMAC. This designation does not release Metromail Corporation from any past or future liability which may arise from the petroleum contamination which originated from the underground storage tank system at this site. It does mean that the SMS is not requiring any additional work be performed at this site in response to the 1994 release. If any additional information comes to light in the future, then the SMS may reconsider this determination.

If you have any questions concerning this matter, please feel free to contact Richard Spiese or me at (802) 241-3888.

Sincerely,

George Desch, P.E., Chief
Sites Management Section
